Insurance Underwriting Evidence — Platform Flows

Prepared: 2026-06-05

Companion document: INSURANCE-RECEIPTS.md (every number with file:line citation)

Why this packet exists

Dollor.ai is a matchmaking platform, not a TNC or delivery company. This packet visually demonstrates the platform's narrow role: introducing independent restaurants and drivers to customers, charging a flat matchmaking fee that does NOT scale with order size, surge, or geography. The drivers and restaurants take home 90%+ of every dollar the customer pays.

Fee structure (verifiable in production code)

Service	Customer pays	Driver / Restaurant pays Dollor	Driver / Restaurant keeps
Food delivery	\$1 service fee	Restaurant: \$1 / order	100% of delivery fee + tips
Rideshare $\leq$ \$35	Fare + \$1	Driver: \$1 of fare	Fare – \$1 + tips
Rideshare \$35-70	Fare + \$2	Driver: \$2 of fare	Fare – \$2 + tips
Rideshare > \$70	Fare + \$3	Driver: \$3 of fare	Fare – \$3 + tips

Trip 1 — Food Delivery: Customer view

Customer DOLL2026406. Customer paid \$42.10 total (\$25.97 food + \$8.25 distance-priced delivery fee + \$5.00 tip + \$1.00 Dollor service fee + \$1.88 CA sales tax). The flat \$1 service fee does not scale with order size, surge, or geography. See INSURANCE-RECEIPTS.md → Trip 1 → Customer Receipt.

Spotlight — DOLL2026525 per-party receipt (real prod data)

Order placed via API as demo.customer on 2026-06-05, accepted by demo.restaurant, picked up + delivered by demo.driver (Marcus Johnson). Journal entry JE-20260605-00220 created on prod, all numbers verifiable via /api/customer/orders. Receipt rendered to iPhone-16 dimensions from the actual API response — demonstrates the matchmaking fee structure (\$1 from customer + \$1 from restaurant = \$2.00, ~6% of total) end-to-end.

Appendix A — Trip 1 receipt math (excerpt)

Live food delivery order DOLL2026406, placed 2026-06-04T07:13Z. Apple Park (37.3349, -122.009) → Palo Alto (37.4419, -122.1700). Haversine = 11.52 mi. Distance-priced delivery fee = $\$2.49 + 11.52 \times \$0.50 = \$8.25$.

```
Customer: food $25.97 + delivery $8.25 + tip $5.00 + service $1.00 + tax $1.88 = $42.10
Restaurant: $25.97 - $1.00 platform fee = $24.97 net (96%)
Driver: $8.25 (100% kept) + $5.00 (100% kept) = $13.25
Dollor: $1.00 (customer) + $1.00 (restaurant) = $2.00 (4.8%)
Sales tax: $1.88 (CA, passed through)
```

Appendix B — Trip 2 receipt math (worked example)

Rideshare trip, \$20 fare (tier 1: $\leq \$35$). Source: rideshare_payments.py:36-43.

```
Customer: $20.00 fare + $1.00 service = $21.00 (+ tip)
Driver: $20.00 - $1.00 = $19.00 (+ 100% of tip)
Dollor: $1.00 (customer) + $1.00 (driver) = $2.00 (9.5%)
```

Full numbers, with file:line citations to the prod backend, in INSURANCE-RECEIPTS.md.
