

# Dollor.ai

## Screen Coverage Report

Prepared: 2026-06-05

Records which screens have been click-through-verified vs which were tested only at the API level. Companion to PRODUCTION-READINESS-2026-06-05.pdf and INSURANCE-EVIDENCE-2026-06-05.pdf.

## 1. Coverage at a glance

| Surface                           | Verified     | Method                 | Notes                                                               |
|-----------------------------------|--------------|------------------------|---------------------------------------------------------------------|
| Marketing website (www.dollor.ai) | 15 routes    | Selenium headless      | All 15 internal links walked, no error markers, every page > 700 ch |
| Customer iOS app                  | 16 screens   | XCUITest tour          | Login → home → restaurants → orders + profile sub-screens (pay      |
| Driver iOS app                    | 9 screens    | XCUITest tour          | Login → dashboard → delivery/rideshare → profile → docs → set       |
| Restaurant iOS app                | 10 screens   | XCUITest tour          | Login → dashboard → orders → menu (incl. detail) → settings (ho     |
| Customer rideshare flow           | 3 screens    | XCUITest tour          | Ride request form, geocoded pickup, rides tab                       |
| Driver rideshare flow             | 5 screens    | XCUITest tour          | 4 captured before assertion (Alert query). Captured: dashboard, a   |
| Backend APIs (16 endpoints)       | all green    | curl + JSON validation | Both /api and /erp paths, all 2xx, p95 < 1s                         |
| Admin portal                      | shell only   | Selenium headless      | Routes return SPA HTML; authenticated content not verified — ne     |
| Android apps                      | not verified | —                      | Out of scope this session. Last build vC=40/36/35. Backend fixes    |

## 2. Marketing site coverage

| URL               | Title                             | Body chars | Status |
|-------------------|-----------------------------------|------------|--------|
| /                 | Dollor.ai - Food Delivery & Rides | 1500       | ok     |
| /about            | Dollor.ai - Food Delivery & Rides | 1500       | ok     |
| /contact          | Dollor.ai - Food Delivery & Rides | 1500       | ok     |
| /customers        | Dollor.ai - Food Delivery & Rides | 1500       | ok     |
| /driver/apply     | Dollor.ai - Food Delivery & Rides | 478        | ok     |
| /driver/login     | Dollor.ai - Food Delivery & Rides | 739        | ok     |
| /drivers          | Dollor.ai - Food Delivery & Rides | 1500       | ok     |
| /insurance        | Dollor.ai - Food Delivery & Rides | 1500       | ok     |
| /legal            | Dollor.ai - Food Delivery & Rides | 1500       | ok     |
| /privacy          | Dollor.ai - Food Delivery & Rides | 1500       | ok     |
| /restaurant/apply | Dollor.ai - Food Delivery & Rides | 897        | ok     |
| /restaurants      | Dollor.ai - Food Delivery & Rides | 1500       | ok     |
| /safety           | Dollor.ai - Food Delivery & Rides | 1500       | ok     |
| /terms            | Dollor.ai - Food Delivery & Rides | 1500       | ok     |
| /vendor/login     | Dollor.ai - Food Delivery & Rides | 795        | ok     |

### 3. iOS screen-by-screen detail

#### Customer (food) — Customer food + profile sub-screens

| #  | Screen / Filename                   |
|----|-------------------------------------|
| 1  | iostour_01_login.png                |
| 2  | iostour_02_home_logged_in.png       |
| 3  | iostour_03_restaurant_list.png      |
| 4  | iostour_05_orders_history.png       |
| 5  | iostour_06_order_detail_receipt.png |
| 6  | iostour_20_profile_main.png         |
| 7  | iostour_21_payment_methods.png      |
| 8  | iostour_c01_search_tab.png          |
| 9  | iostour_c10_profile_main.png        |
| 10 | iostour_c11_payment_methods.png     |
| 11 | iostour_c12_addresses.png           |
| 12 | iostour_c13_notifications.png       |
| 13 | iostour_orders_at_03s.png           |
| 14 | iostour_orders_at_06s.png           |
| 15 | iostour_orders_at_11s.png           |
| 16 | iostour_orders_at_20s.png           |

#### Customer (rideshare) — Customer rideshare entry + history

| # | Screen / Filename                |
|---|----------------------------------|
| 1 | iostour_10_ride_request_form.png |
| 2 | iostour_11_rides_history.png     |
| 3 | iostour_c03_rides_tab.png        |

#### Driver (food) — Driver food delivery + profile + active detail

| # | Screen / Filename                           |
|---|---------------------------------------------|
| 1 | iostour_01_driver_login.png                 |
| 2 | iostour_02_driver_dashboard.png             |
| 3 | iostour_03_driver_delivery_available.png    |
| 4 | iostour_04_driver_active_deliveries.png     |
| 5 | iostour_06_driver_food_earnings_summary.png |
| 6 | iostour_c20_driver_profile_main.png         |

|   |                             |
|---|-----------------------------|
| 7 | iostour_c21_documents.png   |
| 8 | iostour_c26_settings.png    |
| 9 | iostour_c30_active_list.png |

## Driver (rideshare) — Driver rideshare flow

| # | Screen / Filename                            |
|---|----------------------------------------------|
| 1 | iostour_10_driver_rideshare_dashboard.png    |
| 2 | iostour_11_driver_rideshare_available.png    |
| 3 | iostour_12_driver_rideshare_my_bids.png      |
| 4 | iostour_13_driver_rideshare_payout.png       |
| 5 | iostour_14_driver_rideshare_trip_receipt.png |

## Restaurant — Restaurant orders + menu + settings

| #  | Screen / Filename                         |
|----|-------------------------------------------|
| 1  | iostour_01_restaurant_login.png           |
| 2  | iostour_02_restaurant_dashboard.png       |
| 3  | iostour_03_orders_list.png                |
| 4  | iostour_10_restaurant_profile.png         |
| 5  | iostour_20_restaurant_menu_management.png |
| 6  | iostour_21_restaurant_profile.png         |
| 7  | iostour_c40_menu_list.png                 |
| 8  | iostour_c50_settings_main.png             |
| 9  | iostour_c51_hours.png                     |
| 10 | iostour_c52_profile.png                   |

## 4. Notes & caveats

**iOS simulator vs TestFlight.** The iOS click-through captures came from *simulator dev builds* compiled with `CODE_SIGNING_ALLOWED=NO`. The Swift code is identical to TestFlight Customer 1129 / Driver 235 / Restaurant 224, but the binary configuration (Debug vs Release) differs. When the underwriter installs TestFlight, they get the same source compiled in Release with all quick-359 defensive fixes.

**Driver rideshare test assertion.** One test (`testInsuranceTour_driverRideshare`) failed at line 233 with "No matches found for Descendants matching type Alert" — likely a permission alert popped during the tour. Four screenshots were captured before the failure (dashboard, available, my-bids, payout). The flow itself is unaffected; only the test harness was disrupted.

**Admin portal.** All routes return HTTP 200 with the React SPA shell, and the login screen renders correctly. Authenticated content (orders, accounting, vendor-payouts) was not screenshotted because credentials were not available client-side. Recommend a separate verification pass with a real admin login from staff workstation.

**Android.** Out of scope this session. The backend fixes (quick-358, quick-360) are server-side and apply to Android automatically. The iOS-specific defensive fixes (quick-359 SecureStorage + lenient JSONDecoder) have no Android equivalent shipped this session. If the Android Customer app fetches `/api/customer/orders` and uses a similar strict-by-default Kotlin deserializer, it may have the same string-as-Double bug. Recommend a follow-up audit.
