

Dollor.ai

Insurance Underwriting Evidence — Platform Flows

Prepared: 2026-06-04

Companion document: INSURANCE-RECEIPTS.md (every number with file:line citation)

Why this packet exists

Dollor.ai is a matchmaking platform, not a TNC or delivery company. This packet visually demonstrates the platform's narrow role: introducing independent restaurants and drivers to customers, charging a flat matchmaking fee that does NOT scale with order size, surge, or geography. The drivers and restaurants take home 90%+ of every dollar the customer pays.

Fee structure (verifiable in production code)

Service	Customer pays	Driver / Restaurant pays Dollor	Driver / Restaurant keeps
Food delivery	\$1 service fee	Restaurant: \$1 / order	100% of delivery fee + tips
Rideshare $\leq$ \$35	Fare + \$1	Driver: \$1 of fare	Fare – \$1 + tips
Rideshare \$35-70	Fare + \$2	Driver: \$2 of fare	Fare – \$2 + tips
Rideshare > \$70	Fare + \$3	Driver: \$3 of fare	Fare – \$3 + tips

Trip 1 — Food Delivery: Customer view

Customer DOLL2026406. Customer paid \$42.10 total (\$25.97 food + \$8.25 distance-priced delivery fee + \$5.00 tip + \$1.00 Dolor service fee + \$1.88 CA sales tax). The flat \$1 service fee does not scale with order size, surge, or geography. See INSURANCE-RECEIPTS.md → Trip 1 → Customer Receipt.

Trip 2 — Rideshare: Rider view

Worked example: \$20 fare → customer pays \$21.00 (\$20 fare + \$1 service fee). Receipt shows fare math and the flat matchmaking fee separately. Fare tier: ≤\$35 → \$1. \$35-70 → \$2. >\$70 → \$3. (rideshare_payments.py:36)

The screenshot shows the Dollar.ai rider interface. At the top, there's a dark header with the Dollar.ai logo and a user profile icon labeled "Demo Customer". Below the header is a progress bar with five steps: Location (active), Confirm, Matching, Ride, and Done. The main content area is a white card titled "Where are you going?". It contains two location input fields. The first field has a green location pin icon and contains the text "12 Teaberry Lane, Rancho Santa Margarita, CA 92688". Below it is a "Use Current" link and a "Search Location" button. The second field has a red location pin icon and contains the text "1 World Way, Los Angeles, CA 90045". Below it is a "Search" button. A red location pin icon is also shown below the second field, with the text "Los Angeles, California 90045 (33.9447, -118.3983)". Below the location fields is a section titled "Add a tip for your driver (optional)" with four buttons: "No tip", "\$2", "\$5", and "\$10". At the bottom of the card is a large green button labeled "Get Price Estimate". Below the card, there is a small green icon and text: "Tiered by fare: \$1 (≤\$35) | \$2 (\$35-\$70) | \$3 (>\$70). Both rider and driver pay."

rideshare-rider/01-ride-request-ready.png — Ride request — pickup + dropoff

This screenshot is identical to the one above, showing the Dollar.ai rider interface with the "Where are you going?" form. The form contains the same location inputs, search buttons, and tip options. The progress bar at the top shows the "Location" step as active. The text at the bottom of the card remains the same: "Tiered by fare: \$1 (≤\$35) | \$2 (\$35-\$70) | \$3 (>\$70). Both rider and driver pay."

rideshare-rider/02-pickup-geocoded.png — Geocoded pickup confirmed

Trip 2 — Rideshare: Driver view

Driver collects \$19.00 take-home of a \$20 fare (\$1 matchmaking fee on tier 1), 100% of tips. Platform never directs the driver between trips. Source: `rideshare_payments.py:79` — see receipts doc Trip 2 Driver Receipt.

Gap — no screenshots captured for this flow yet.

This flow's receipt math is documented in `INSURANCE-RECEIPTS.md` with file:line citations to production code. Visual capture is queued: see `.planning/insurance/2026-06-05/GAPS.md` for the recipe.

Appendix A — Trip 1 receipt math (excerpt)

Live food delivery order DOLL2026406, placed 2026-06-04T07:13Z. Apple Park (37.3349, -122.009) → Palo Alto (37.4419, -122.1700). Haversine = 11.52 mi. Distance-priced delivery fee = $\$2.49 + 11.52 \times \$0.50 = \$8.25$.

```
Customer: food $25.97 + delivery $8.25 + tip $5.00 + service $1.00 + tax $1.88 = $42.10
Restaurant: $25.97 - $1.00 platform fee = $24.97 net (96%)
Driver: $8.25 (100% kept) + $5.00 (100% kept) = $13.25
Dollor: $1.00 (customer) + $1.00 (restaurant) = $2.00 (4.8%)
Sales tax: $1.88 (CA, passed through)
```

Appendix B — Trip 2 receipt math (worked example)

Rideshare trip, \$20 fare (tier 1: $\leq \$35$). Source: rideshare_payments.py:36-43.

```
Customer: $20.00 fare + $1.00 service = $21.00 (+ tip)
Driver: $20.00 - $1.00 = $19.00 (+ 100% of tip)
Dollor: $1.00 (customer) + $1.00 (driver) = $2.00 (9.5%)
```

Full numbers, with file:line citations to the prod backend, in INSURANCE-RECEIPTS.md.
